

A Faster Alternative...

Thermal-based Temperature Monitoring Solution

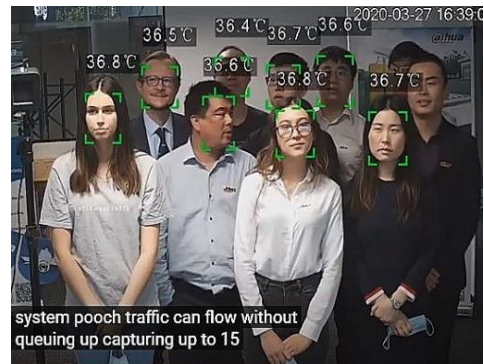

“New Technology that can help you open up your Business Safely”

At a time like this, our automated AI based temperature scanning system and Face Mask detection system can go a long way in ensuring safety of your employees and customers and help you in the fight against COVID-19.

Computel Systems, Inc. is proud to introduce a new range of thermal temperature monitoring solutions to help your organization deal with this pandemic. The system can detect wearing of facial mask with a gentle reminder and can record person’s identity with built-in facial recognition capability. Our all-in-one system is easy to use, just

plug it in and it starts working. The Thermal Temperature Monitoring Systems are compact, economical and easily deployed for monitoring human skin temperature using the latest approved thermal technology focussing only on the forehead area and it can see through even a helmet using facial recognition and artificial intelligence built in to ensure thermal accuracy of $\pm 0.54F$. The system

monitors up to 3 people/second, much faster than a hand held thermometers and without the fear of cross contamination. The system provides live alerts & data is recorded for keeping track of all events. A small system will only cost you about *\$20/day -much cheaper, faster and accurate scanning than the cost of hiring people to do the same job. This solution can be applicable for monitoring warehouses, manufacturing plants, schools, hospitals, banks, offices and retail locations.
